Crawling through the dirt, worms are hard at work, helping plants to grow. Worms help the fruit and vegetables we eat by loosening the soil and feeding the plants. Read and find out about these wiggling wonders! "Offers a study of culture in the sixteenth century as seen through the eyes of one man, the miller known as Menocchio, who was accused of heresy during the Inquisition and sentenced to death. This book illustrates the confusing political and religious conditions of the time"--Publisher marketing. Armed with razor-sharp teeth and capable of drinking many times its volume of blood, the leech is an unlikely cure for ill health. Yet that is exactly the role this worm-like parasite has played in both Western and Eastern medicine throughout history. In this book, Robert G. W. Kirk and Neil Pemberton explore how the leech surfaces in radically different spheres. The ancients used them in humeral medicine to bring the four humors of the body—blood, phlegm, and black and yellow bile—back into balance. Today, leeches are used in plastic and reconstructive surgery to help reattach severed limbs and remove pools of blood before it kills tissue. Leeches have also been used in a nineteenth-century meteorological barometer and a twentieth-century biomedical tool that helped win a Nobel Prize. Kirk and Pemberton also reveal the dark side of leeches as they are portrayed in fiction, film, and popular culture. From Bram Stoker's *Dracula* to a video game player's nemesis, the leech is used to represent the fears of science run amok. Leech shines new light on one of humanity's most enduring and unlikely companions. Defines the current status of research in the genetics, anatomy, and development of the nematode *C. elegans*, providing a detailed molecular explanation of how development is regulated and how the nervous system specifies varied aspects of behavior. Contains sections on the genome, development, neural networks and behavior, and life history and evolution. Appendices offer genetic nomenclature, a list of laboratory strain and allele designations, skeleton genetic maps, a list of characterized genes, a table of neurotransmitter assignments for specific neurons, and information on codon usage. Includes bandw photos. For researchers in worm studies, as well as the wider community of researchers in cell and molecular biology. Excerpt from Worms and Crustacea This pamphlet could not have been published but for the assistance of Miss J. M. Arms, who prepared the text and most of the drawings, and some other person unknown to me, who has indulgently considered it of sufficient importance to teachers to be willing to defray the expenses of drawing the plates. I also desire to acknowledge my indebtedness to the knowledge and critical ability of Mr. L. H. Van Vleck, Assistant in the Museum. The plates were drawn by Miss Katherine Peirson of Salem, with accuracy and success, though the method of printing does not do justice to the fineness of the work.
