Estrogen and the Vessel Wall Apr 29 2021 Estrogen and the Vessel Wall marks the start of a new era in understanding the cardiovascular actions of estrogen. It examines the hypothesis, derived from a growing body of epidemiological data, that estrogen acts directly upon the vessel wall to produce beneficial effects in the cardiovascular system. Inspired by a satellite symposium of the IX International Vascular Biology Meeting, additional topics have been included, covered by leading experts. All subjects have been brought together here to produce an outstanding and integral publication, a milestone in the field of Vascular Research.

Art and Artifice Aug 14 2022 From the author of Hiding the Elephant and The Glorious Deception comes a collection of five essays that shows how the great stage illusions were integrally products of their time, based on the traditions and fashions of the people, and the offspring of the incredible, inventive personalities who brought them to the stage. Like no other author, Jim Steinmeyer gives us insight into the timeless appeal of magic. His human subjects include such characters as Steele MacKaye, Maskelyne, David Devant, P.T. Selbit, Horace Goldin, and Charles Morritt. Illusions he discusses include: The Mascot Moth, Sawing a Lady in Halves, and Morrirt's Disappearing Donkey.

Regulatory Mechanisms in Breast Cancer Sep 03 2021 In Breast Cancer: Cellular and Molecular Biology [Kluwer Academic Publishers, 1988], we tried to present an introduction to the emerging basic studies on steroid receptors, oncogenes, and growth factors in the regulation of normal and malignant mammary epithelium. The response to this volume was superb, indicating a tremendous interest in basic growth regulatory mechanisms governing breast cancer and controlling its malignant progression. In the two years since its publication, much new and exciting information has been published and the full interplay of regulatory mechanisms is now beginning to emerge. We have divided this book into four sections that we hope will unify important concepts and help to crystallize areas of consensus and/or disagreement among a diverse group of basic and clinical scientists working on the disease. The first section is devoted to studies on oncogenes, antioncogenes, proliferation, and tumor prognosis. The first chapter, by Sunderland and McGuire, introduces the characteristics of breast cancer as studied by pathologists to establish prognostic outcome. Of particular interest is a new proto oncogene called HER-2 (or neu), which is rapidly becoming accepted as a valuable new tumor marker of poor prognosis. The second chapter, by Lee Bookstein and Lee, introduces the best known antioncogene, the retinoblastoma antioncogene, whose expression is sometimes lost in breast cancer. Malignant progression appears to be influenced by the balance of proto oncogene and antioncogene expression.

The Magic Book Mar 09 2022 Perform incredible vanishing tricks in front of an astonished audience Create potions that fizz, hiss, bubble, and bang Amaze friends with your astounding mind-reading powers Conjure up an enchanted bag A bewitching brew of extraordinary illusions and magical marvels

Tamoxifen Tales Feb 25 2021 Tamoxifen Tales: Suggestions for Scientific Survival presents a case study describing the academic journey of teams behind major advances in medical sciences, highlighting lessons learned that are applicable to the next generation of scientists. This book provides a manual on the successful mentoring of young scientists, including stories describing how training experience shaped careers to become leaders in academia and the pharmaceutical industry. The book documents Professor V. Craig Jordan's 50-year career in medical sciences that led to the discovery and development of Selective Estrogen Receptor Modulators (SERMs), which became the standard of women's healthcare around the world. Additionally, it illustrates the versatility of a scientist with a commitment to serving societies. This important resource will be a useful and interesting book for established medical scientists, research mentors and advanced students wanting to chart a successful and impactful research career. Highlights lessons learned from the journey behind discovery science that are applicable to the scientific journey of the next generation of scientists Provides a manual on the successful mentoring of young scientists to become leaders in academia and the pharmaceutical industry Examines cancer treatment based on a personal determination to challenge at the frontiers of the science and to relate to personal life experience Includes references for further research reading

A Snowball In Hell Feb 08 2022 The third book in the Angeliq De Xavier series, from author Christopher Brookmyre. If society has the B-list celebrities it deserves, it now has a killer to match. Except that Simon Darcourt is a great deal more successful in his career choice than the average talent show contestant. He's also got the media taped - by the simple expedient of by-passing them completely and posting real-time coverage of his killings on the internet. He's got viewing figures to make the world's TV executives gasp in envy, and he's pulling the voyeuristic strings of every viewer by getting them to 'vote' to keep his captives alive. Angeliq De Xavier, his previous nemesis, is drafted onto the police team trying to bring this one-man celebrity hate-fest to an end. But she can't do it alone, she needs the magical skills of her lover, only she doesn't know where Zal is and meanwhile a whole load of celebs are, literally, dying to be famous. An intelligent satire, a thriller with exhilarating pace - Christopher Brookmyre at his best.

The Magic in Books Apr 10 2022 "Leo Behnke, one of magic's most gifted (and prolific!) writers has finally written the story of his life in the twin worlds of magic and books, and how he has often succeeded in combining his two passions. Leo was Steve Martin's first boss (and mentor!) at the newly opened Disneyland, was one of the very first magicians hired by the newly opened Magic Castle, and worked closely with Ricky Jay and later David Copperfield to develop and maintain one of the premier magic collections in the world. Others featured prominently in his story include Gene Finnell, John Daniels, Owen Magic, Mark Wilson, Bill and Milt Larsen, John Gaughan, Johnny Carson, Jay Marshall, Clarke "the Senator" Crandall, Don and Joan Lawton, Jay Ose, Bev Bergeron, Alan Wakeling, Lynn Searles, Ray Bradbury, C. A. George Newmann, Mike Caveney, Shari Lewis, Harry Blackstone, Jr., Steve Forte, Burton Sperber, Dr. Stanley Jaks and Leo's wife, Pat. A bibliography of all the books Leo has authored, edited and/or designed is included as an appendix. This is sure to delight the many fans, old and new, of Leo Behnke! Foreword by Steve Martin." -- publisher's website.

Billboard Dec 14 2019 In its 114th year, Billboard remains the world's premier weekly music publication and a diverse digital, events, brand, content and data licensing platform. Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music, video, gaming, media, digital and mobile entertainment issues and trends.

Anticancer Drug Discovery and Development: Natural Products and New Molecular Models Aug 22 2020 With the publication of these proceedings from the Second Drug Discovery and Development Symposium, this forum has become the main mechanism for bringing together the principal groups involved in both discovering and developing new approaches to the treatment of cancer. This Second Symposium emphasized the types of materials being discovered and their therapeutic activity. This is especially evident in the natural product discovery programs, where unique and active structures are being identified. The major contributors to the meeting were the investigators participating in the National Cooperative (Natural Products) Drug Discovery Groups [NC(NP)DDG]. These groups reflect an association among researchers at universities or cancer centers, pharmaceutical companies and the National Cancer Institute. Their sources of materials are varied, reflecting chemical inventories of pharmaceutical companies, organic synthetic compounds from the laboratory, cytotoxics as well as biologics and their hybrids, and natural products obtained from plants, marine organisms and microorganisms. The models employed in the discovery systems vary from broadly cellular based to specific enzymes to defined cellular functions. Each of them is believed important to the malignant state and will allow for the discovery of compounds which will have efficacy in cancer therapy. The goal of the participants is both to discover new anticancer agents and to develop them as efficiently as possible into clinically useful additions to treatment. Of importance is the fact that there are a number of promising leads which will soon be moving into the clinic thereby testing the effectiveness of this NC (NP) DDG approach.

Tamoxifen Sep 22 2020 Tamoxifen is a pioneering medicine for the treatment and prevention of breast cancer. It is the first drug targeted therapy in cancer to be successful. Tamoxifen targets the tumor estrogen receptor. The therapy is known to have saved the lives of millions of women over the past 40 years. This monograph, written by V. Craig Jordan - known as the "father of tamoxifen" - and his Tamoxifen Team at the Georgetown University Washington DC, illustrates the journey of this milestone in medicine. It includes a personal interview with V. Craig Jordan about his four decades of discovery in breast cancer research and treatment. V. Craig Jordan was there for the birth of tamoxifen as he is credited for reinventing a "failed morning after contraceptive" to become the "gold standard" for the treatment of breast cancer. He contributed to every aspect of tamoxifen application in therapeutics and all aspects of tamoxifen's pharmacology. He discovered the selective estrogen receptor modulators (SERMs) and explored the new biology of estrogen-induced apoptosis.

Aromatase Inhibitors Jan 07 2022 Many breast tumours are dependent upon oestrogen for their development and continued growth. Over the last 25 years hormone therapy has progressed from the irreversible destruction of endocrine glands to the use of drugs that reversibly suppress oestrogen synthesis or action. The inhibition of oestrogen synthesis is most readily achieved by inhibiting the final step in the pathway of oestrogen biosynthesis, the reaction which transforms androgens into oestrogens by creating an aromatic ring in the steroid molecule (hence the enzyme's trivial name, aromatase). Whereas the first aromatase inhibitors to be used therapeutically could be shown to produce drug-induced inhibition of the enzyme and therapeutic benefits in patients with breast cancer, they were not particularly potent and lacked specificity. However, second-generation drugs were developed and most recently third-generation inhibitors have evolved which possess remarkable specificity and potency. Initial results from clinical trials suggest that these agents will become the cornerstones of future endocrine therapy.

The History of Oncology Oct 04 2021 "The story of oncology is not only fascinating but also contains many accounts of dead ends, chance discoveries, illusions, mistakes and disappointments alongside the few successes." These words are taken from the introduction to this book. The author, professor emeritus of Medical Oncology, reviews all aspects of the problem of cancer from a historical perspective, from the oldest existing records to the latest scientific and medical advances. It will interest the many people engaged in the treatment of cancer to read how the current therapeutic methods came about, and the book may also provide inspiration for cancer researchers, and for all those directly or indirectly involved with cancer. The layman looking for background information on a particular treatment may find it useful too. The various chapters can be read independently. A glossary and a few explanatory diagrams augment the text. This book grew out of an invitation the author received to lecture on the history of oncology. During his background reading, he discovered that there was no single volume dealing with the entire history of the subject. Fortunately, however, a great deal of information could be found here and there in the literature. As he read, he was struck by the fascinating stories behind many discoveries, and felt impelled to put them together in a single comprehensive account. The results of his labors are presented in this remarkable volume. The author, Prof. D.J.Th. (Theo) Wagener, was head of the department of Medical Oncology at the Radboud University Nijmegen Medical Centre in the Netherlands from 1982 to 2001, chairman of the Educational Committee of the European Society of Medical Oncology (ESMO), a member of the Educational Committee of the American Society of Clinical Oncology (ASCO) and a member of various international scientific working groups, mainly of the European Organization for Research and Treatment of Cancer (EORTC).

Hormone Therapy in Breast and Prostate Cancer Nov 05 2021 This book describes the principles underlying targeted hormonal treatments, assesses the actions of new and established agents, and illustrates the new applications of hormonal chemoprevention for breast cancer.

Alan Wakeling, Director at Hydrus Hygiene, Hydrus Oil and Gas, Hydrus Power Sep 15 2022 Biography of Alan Wakeling, currently Director at Hydrus Hygiene, Hydrus Oil and Gas, Hydrus Power, previously Sales Engineer at ETP Services Limited and Sales Engineer at Advanced Oxidation Limited.

Mark Wilson's Complete Course in Magic Jul 01 2021 The ultimate book of magic for kids from a world-famous magician, complete with photographs for easy to follow instructions. From one of the world's premier practitioners of classic magic, with years of experience instructing younger readers in the magical arts, comes this new revision of his complete guide to learning and performing fantastic feats of prestidigitation. Acclaimed by the Los Angeles Times as "the text that young magicians swear by," it's full of step-by-step instructions. More than 2,000 illustrations provide the know-how behind 300 techniques, from basic card tricks to advanced levitation, along with advice on planning and staging a professional-quality magic show.

Alan Wakeling, Retailer Oct 16 2022 Biography of Alan Wakeling, currently retailer at sweetyesterdays, previously Security Officer at Maritime and Aviation Security Services.

Tamoxifen Nov 12 2019 Tamoxifen has persisted as a widely accepted and administered drug for almost 25 years. Following the many scientific papers and books on the subject, it has remained a very intriguing substance. This, perhaps, is the reason for another monograph on Tamoxifen. It is regrettably true that overviews, even when up to date after exhaustive research - the shibboleth of our cultures -, rapidly lose relevance with the passage of time. Scientists can sometimes be pictured as deep sea divers, who plunge into the unknown in search of a hitherto unknown world. Their descent is exciting, but eventually they must come up for air and integrate their experiences with others who also had to resurface. This book intends to collect and, where possible, to collate recent, but sometimes seemingly unrelated information. To quote Stephane Mallarme: "Everything in the world exists to end up in a book". Even if this is a tad cynical, it might not be far from the truth. If a little knowledge is a dangerous commodity, one can also add - tongue in cheek - that a vast amount of knowledge can be truly hazardous. It is likely that what might seem as entangled data is confusing, especially for those satisfied with the comfortable interpretation of Tamoxifen as an antiestrogen which has long been found insufficient. The complexity of its mechanisms and effects defies simple explanations and may even seem capricious, but only because of our ignorance.
